

# Fundamentals of Computer Engineering

## Module I - Unit 2 The current context of Computer Sciences.

Teachers: Moisés Martínez (1ºA English)

Year: 2022 - 2023

# What do you want to be when you finish?

# Some important question.

# Some important questions ....

## Thinking about

What is Computer Science?

What is Computer Engineering?

What does a computer engineer do?

What does he or she need to do?

What is the work like today?

# Some important questions ....

## Thinking about

### What is Computer Science?

The study of **computers** and **computing**, including their theoretical and algorithmic foundations, hardware and software, and their uses for processing information. The discipline of computer science includes the study of algorithms and data structures, computer and network design, modeling data and information processes, and artificial intelligence.

# Some important questions ....

## Thinking about

### What is Computer Engineering?

Computer engineering is a branch of electrical engineering that integrates several fields of **computer science** and electronic engineering required to develop computer hardware and software.

# Some important questions ....

## Thinking about

### What does a Computer Engineer do?

Computer engineers are involved in many hardware and software aspects of computing, from the design of individual microcontrollers, microprocessors, personal computers, and supercomputers, to circuit design. Computer engineers write **software** and **firmware** for embedded **microcontrollers**, designing **chips**, designing **analog sensors**, designing mixed signal circuit boards, designing **operating systems**, **robotic systems**, **control systems** and **AI systems**.

# The technology wave

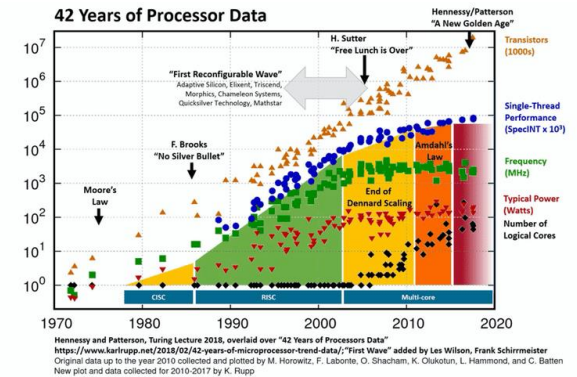

# The technology wave

## Moore's Law

In 1965, **Gordon Moore** posited that roughly every two years, the number of transistors on microchips will double. Commonly referred to as Moore's Law, this phenomenon suggests that computational progress will become significantly faster, smaller, and more efficient over time.

**Moore's Law is estimated to end sometime in the 2020s.**

Transistors will be unable to operate within smaller circuits at increasingly higher temperatures. This is due to the fact that cooling the transistors will require more energy than the energy that passes through the transistor itself.

# The technology wave

## Moore's Law

# What is a Computer Engineer?

# Computer Engineer

## What is Computer Engineer?

Computer engineers provide IT solutions (involving digital information) to meet the needs of individuals and organisations based on:

- Hardware
- Software

Welcome to **Wikipedia**, the free encyclopedia that anyone can edit. 1,089,349 articles in English

Today's featured article: **Guqin**

The **Guqin** is the modern name for a seven-string Chinese musical instrument in the **zither** family. It has been played since ancient times, and has traditionally been favored by scholars and literati as an instrument of great subtlety and refinement. Traditionally the instrument was played in a room with a thatched roof. In the 20th century the instrument came to be applied to many other instruments as well. The **yangqin** hammered dulcimer and the **huqin** family of bowed string instruments such as the Western **piano** are examples of this. The guqin is a quiet instrument, with a range of about four octaves. Its open strings are tuned in the **bass** register, and its lowest pitch is about two octaves below middle C.

## Thinking about

What kind of information is on Social Media?

Are you aware of the information we post?

What about the the contract to use some apps?

Is there any law which protect us?

# The integral training of the Computer Engineer

# The integral training

## Thinking about

What must a computer engineer who fulfils his mission in such a world be like?

What kind of skills he must have?

What kind of experiences are good?

Soft skills what is this?

## Thinking about

- He aims to provide engineers with a broader education that allows them not only to **devise technical solutions to a problem**, but also to read people's lives, to read society in order to **identify the challenges and needs** to which they can respond with their profession.
- He seeks to broaden the view of the world and the role of computer engineering and **technology in society**: not **everything is reduced to technology** and our field of knowledge.
- Her aim is to help future engineers to develop a professional career that is in line with their **life project** and that allows them to **develop as a person** and a professional.

# The integral training

## Thinking about

- To develop the future engineer as a whole, knowing that personal and professional competences involve much more than just knowledge.
